

Class -3 Science Assignment

Chap - 1 The Living and the Nonliving

(Start writing answers in your Science copy)

D. Write short answers.

1. Which gas do plants use to make food?

Ans: The gas used by plants to make food is carbon dioxide.

2. Why do all living beings need to take in air?

Ans: All living beings need to take in air to get energy from food.

3. Name two animals that lay eggs and two that give birth to babies.

Ans: Two animals that lay eggs are birds and snakes. Two animals that give birth to babies are dogs and cows.

Draw and label the diagram given on page no. 6 , on the white side of your Science copy. (Plants make their own food using carbon dioxide, water and the energy of sunlight.)
