

STD-4 (Science)

**(Continue your work in the notebook)**

#### **Ch- 4**

#### **Adaptation in animals**

Ques 6- What is meant by migration?

Ans- The process of travelling long distances from one place to another and again returning back to the origin is called migration.

Ques 7-Write any two adaptations of aquatic animals?

Ans- Aquatic animals adapt some special features like-

.Fish have fins that help them to swim.

.They have gills to breathe in water.

Ques 8- Write any three adaptations shown by animals to protect themselves from danger.

Ans- Animals adapt some features to protect themselves from enemies. They are-

.Some animals eg.deer have strong legs that help them to run away fast from danger.

. Some animals merge with the surroundings and make it difficult to detect them.eg tiger

. Some animals eg.turtle have hard shell to protect their soft inner body parts.

Ques 9- Write three points that you should follow to take care of animals.

Ans- We should take care of animals by following ways-

.We should not cut trees as they are homes of many animals and birds.

.We should provide proper shelter to domestic animals.

.We should clean and feed them regularly.
