

ASSIGNMENT
CLASS -5
SUBJECT : SCIENCE

CHAPTER - 6: SOLIDS , LIQUIDS and GASES

To be continued

Q8) Explain sea breeze with the help of a diagram ?

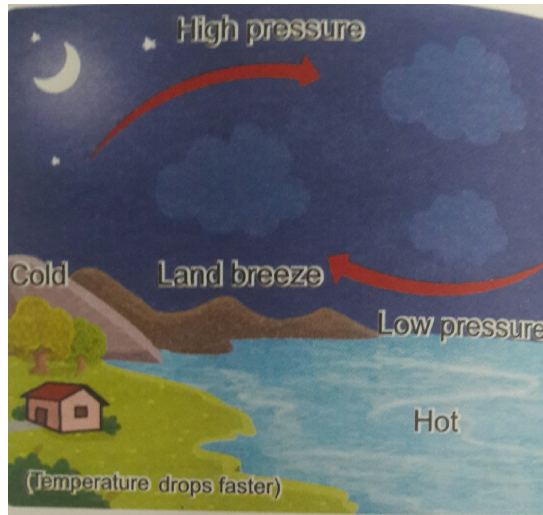

Ans) During day time , land heats up faster than the sea . Due to the heating of air above the land, the warm air rises up from the land . Cooler air from the sea rushes in to take its place . The cooler air moving from the sea towards the land during daytime is called sea breeze .

Q9) Explain land breeze with the help of a diagram .

Ans) During night time, the land cools down faster than the sea . Therefore, the air above the sea is warmer than the air above the land . The warm air rises up and

the cooler air from the land now moves towards the sea to fill up the space . The cooler air moving from the land towards the sea during night time is called land breeze .

Q 10) What are monsoon breeze ?

Ans) The moisture laden winds that moves from the sea towards the land during summer is known as monsoon breeze .
